

Corne layout reference

JonnyLeeHJ/zmk-config, main. Grey keys fall through to the layer below.

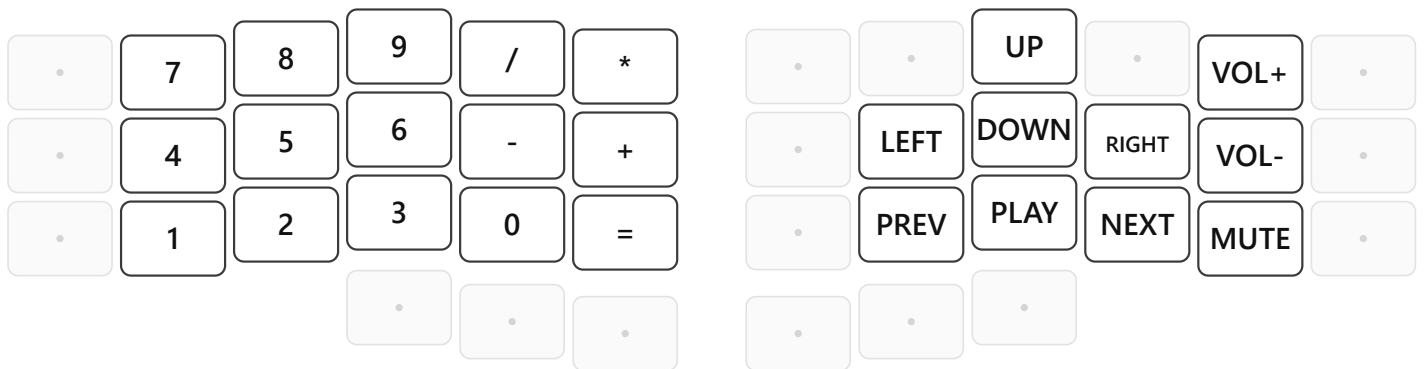

Base no key held

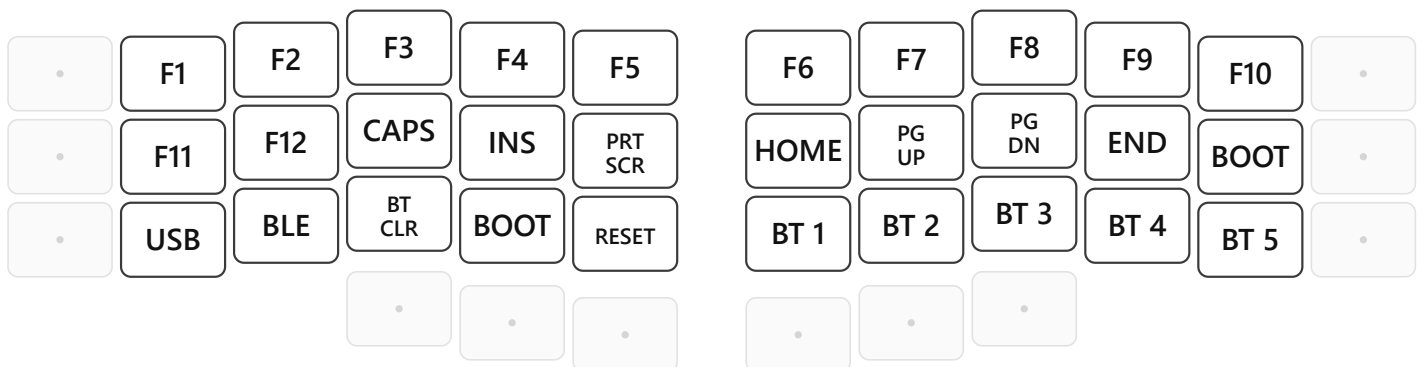

Lower hold left outer thumb

Raise hold bottom right outer key

Adjust hold Lower and Raise together

Orange keys change what the other keys do. J and K type normally when tapped and act as Ctrl and Alt when held. Only the Base layer is printed on the keycaps. Caps word capitalises until a space, and underscores do not break it.
